

AU-SETTLE PRO

Strategic Migration Intelligence Platform

Trieu Bao & Partners

University of Sydney - IT/Software Engineering

April 24, 2026

Abstract

AU-Settle Pro is a data-driven ecosystem designed to digitize the Australian immigration journey. By integrating real-time invitation data, regional quotas, and predictive AI, the platform transforms the "uncertainty" of migration into a calculated strategy for skilled professionals.

6	6. Conclusion	3

1. Executive Summary

The Australian immigration landscape is increasingly competitive. Current tools only provide static point calculations, leaving candidates in the dark regarding their actual chances. **AU-Settle Pro** bridges this gap by offering a **Predictive Probability Score**, allowing users to compare states and regional areas with mathematical precision.

2. Core Product Features & Logic

2.1 2.1 Advanced 100-Point Strategic Calculator

Unlike standard calculators, our system accounts for the competitive reality of the current EOI (Expression of Interest) pool.

- **Subclass 189:** Independent skilled logic focusing on high-demand sectors.
- **Subclass 190:** Integrated state nomination tracking (+5 points).
- **Subclass 491:** Regional strategy focus (+15 points), highlighting pathways in high-growth regional zones.
- **Dynamic Factors:** Real-time toggles for Professional Year (PY), NAATI CCL, and Partner Skill points.

2.2 2.2 The Probability Matrix (Flagship Feature)

This is our unique value proposition. The algorithm predicts invitation likelihood for specific ANZSCO codes:

$$P_{success} = \left(\frac{\text{State Quota}}{\text{EOI Backlog}} \right) \times \text{Trend Coefficient}_{3 \text{ months}} \quad (1)$$

The matrix provides a percentage score for each state, helping users decide where to move or study to maximize their PR (Permanent Residency) chances.

2.3 2.3 Interactive Migration Heatmap

A visual dashboard representing the "Health" of specific occupations across Australia.

- **Green Zones:** High demand, low point cutoff, high quota.
- **Red Zones:** Saturated market, extreme competition.

3. Technical Infrastructure

4. Business & Revenue Strategy

- **Freemium Model:** Free point calculation; Premium (\$19/mo) for deep probability insights.
- **Lead Gen:** Revenue through referral partnerships with Registered Migration Agents (RMAs).
- **B2B:** Data API for education consultants to advise students on high-probability courses.

Layer	Technology Stack	Key Functionality
Front-end	Next.js 14, Tailwind	High-performance Dashboard with SSR for SEO.
Back-end	FastAPI (Python)	Asynchronous processing for probability logic and scraping.
Database	PostgreSQL + Redis	User profiles (SQL) and high-speed caching for EOI stats (Redis).
Cloud/DevOps	AWS (Lambda, EC2)	Serverless scaling for point calculations; secure S3 storage.
AI Core	Google Gemini API	NLP for resume parsing and personalized pathway advisory.

5. Risk Mitigation & Roadmap

- **Policy Agility:** A rule-based engine ensures that legislative changes can be updated in the system in minutes without code changes.
- **Roadmap:**
 - **Q3 2026:** Launch MVP for IT/Engineering sectors.
 - **Q1 2027:** Expansion to Health and Trade; Machine Learning integration for point cutoff forecasting.

6. Conclusion

AU-Settle Pro is designed for the modern migrant who values data over guesswork. By providing clarity on "where" and "how" to settle, we position ourselves as the indispensable guide for Australia's future skilled workforce.
